

The Nucleus Security Platform

Automate and Scale Your Vulnerability and Exposure Management

Enterprise Security Tools Generate Millions of Findings Everyday

Enterprise security tools generate millions of findings everyday. The volume of fragmented data from siloed scanners makes vulnerability management more complex than ever. With Nucleus, security teams can automatically prioritize risk and mitigate critical exposures, at scale.

Manage All Your Vulnerabilities & Exposures in One Hub

Nucleus integrates your vulnerability, threat, and asset data, using 150+ connectors to effectively prioritize critical exposures with business context and threat intelligence.

9B

Vulnerability & Security Findings Processed Daily

2.1%

Critical Risks Prioritized For Immediate Action

60%

Reduction of High-Priority Risks Within 3 Months

Our Technology: Nucleus Data Core

Nucleus transforms your data into: assets, findings, threat intel, users, and tickets — interconnecting them into a Data Fabric Architecture that contextualizes ownership assignment, business and threat risk factors, multi-layered applications, and more.

↑ Continuously Unify

Integrate, normalize, and deduplicate data from all your security and asset tools into one central platform.

🔗 Expertly Organize

Form and connect objects with built-in context and intelligence for vulnerability and risk management.

🔄 Effectively Operationalize

Automate to build workflows that effectively prioritize and mitigate risks faster, at scale.

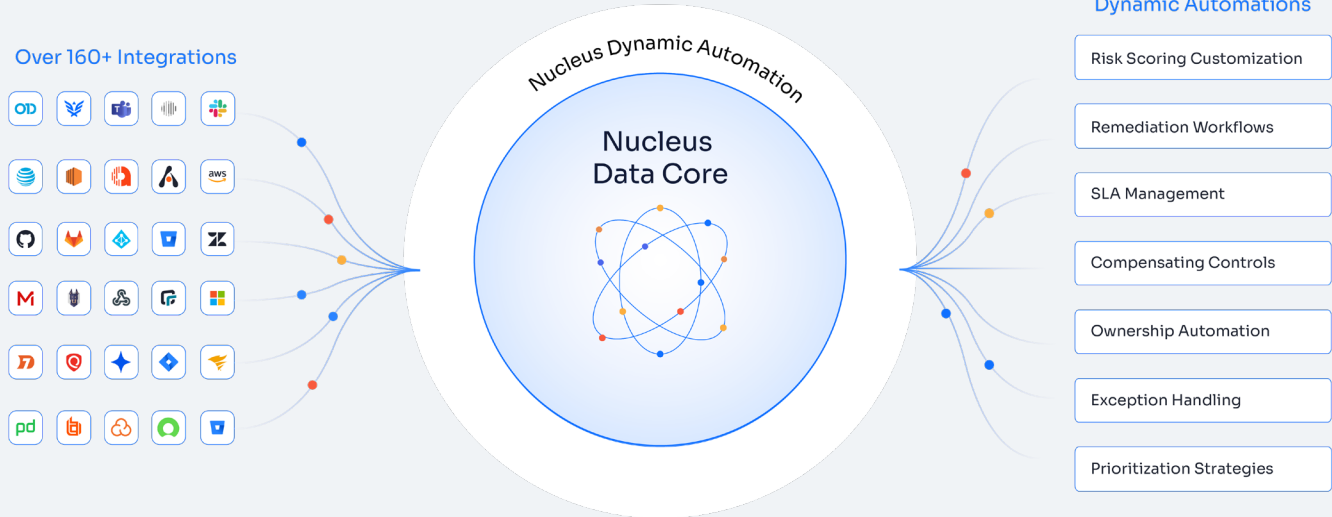

Why Nucleus

- ✓ FedRamp Moderate Authorized platform
- ✓ 150+ integrations provided via built-in connectors and FlexConnect.
- ✓ 18+ sources to enrich and prioritize with real-world threat intelligence and exploit data feeds including Mandiant Advantage, CISA KEV, and EPSS.
- ✓ Unified, automated asset inventory with hierarchical asset grouping, asset deduplication, and container image matching across CI/CD pipelines.
- ✓ Asset and business context risk factors including asset criticality, data sensitivity, compliance scope, and internet exposure.
- ✓ Customizable risk scores tailored to your business needs.
- ✓ Automated ownership assignment across assets and vulnerabilities.
- ✓ Standardized risk prioritization across all security and compliance findings.
- ✓ Bi-directional ticketing integration
- ✓ Risk-based SLAs assignment, tracking, and reporting
- ✓ Compliance and POA&M process automation with scheduled reporting.

Secure to the Core

Nucleus Vulnerability and Exposure Management is FedRAMP Moderate Authorized. Transform and Modernize your program with the Nucleus Security Platform.

See Nucleus in Action

Nucleus Security is the enterprise leader in vulnerability and exposure management. The Nucleus Security Platform enables organizations to prioritize and mitigate vulnerabilities faster, at scale.
