

WHAT IS NUCLEUS, ANYWAY?

VALUE-ADD AT-A-GLANCE CHEATSHEET

Nucleus

What is Vulnerability Management (VM)?

VM is a complex multi-phase process that involves detecting, analyzing, prioritizing, reporting, and fixing vulnerabilities in your network.

What is Nucleus?

Nucleus is a SaaS-based vulnerability and risk management platform used all over the world in large enterprises, MSSPs, and AppSec teams to make the difficult process of VM faster, easier, and less costly.

All Vulnerability Data. One Place.

Nucleus has over 60+ technology integrations to aggregate all of the vulnerability information in the enterprise, and automate the manual VM tasks you are performing today.

Enhance Your Current Stack.

The whole is greater than the sum of its parts. Nucleus orchestration and automation extracts more value from your existing investments in vulnerability scanners, issues trackers, and asset discover/inventory tools.

Do More. Work Less.

Cybersecurity talent is hard to find. Nucleus automates time consuming vulnerability data normalization, analysis, and triage processes, freeing up your team to work on other tasks and projects that can't be automated.

Make Managers Happy.

Nucleus provides simple reports to help you measure the performance of your VM program over time and answer the questions that security management and executives need to make business decisions.

For Enterprises of All Size.

Nucleus pricing is based on the number of devices and applications in your enterprise. Whether you have 500, or 500,000 devices, Nucleus is affordably priced and will scale to meet the requirements of any size organization.

Start Streamlining with Nucleus Today!

With free stellar support and step-by-step guidance along the way, getting started with Nucleus and remediating vulnerabilities faster has never been easier. Visit nucleussec.com/get-started today!
