

BETTER, FASTER, SMARTER UNIFIED VULNERABILITY MANAGEMENT

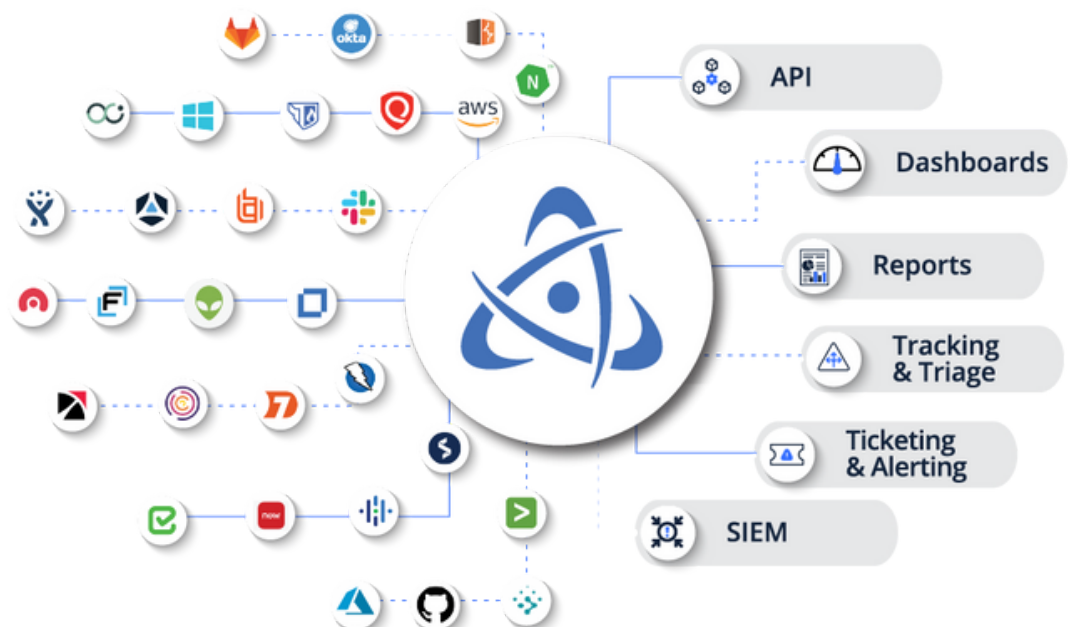

TRADITIONAL VULNERABILITY MANAGEMENT PROGRAMS ARE SLOW, COSTLY, ERROR-PRONE AND INEFFECTIVE.

The race between U.S. adversaries attempting to exploit vulnerable government systems, and government agencies attempting to remediate vulnerabilities, is more intense than ever. Manual vulnerability analysis, triage, and remediation workflows are unable to operate with the speed and accuracy needed to defend against attackers targeting sensitive data and access to critical systems.

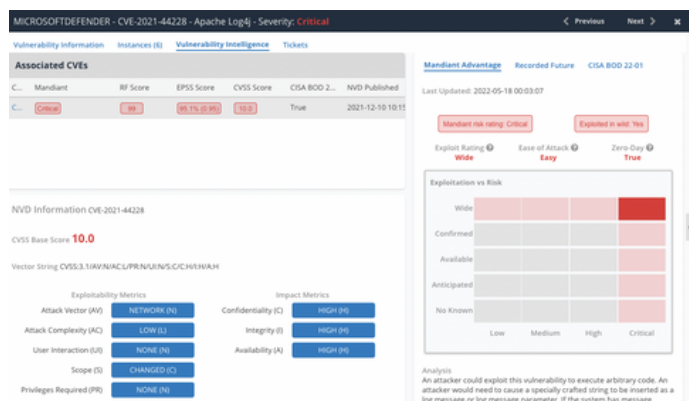

Nucleus integrates with IT and security tools used by the Federal Government to aggregate, normalize, prioritize, and enrich the vulnerability data currently scattered throughout the program. Nucleus automates manual, repetitive, and error-prone vulnerability management workflows, resulting in a **10x** time-to-remediate and efficiency improvements, enabling valuable cybersecurity talent to focus on their mission to defend government systems.

HOW NUCLEUS WORKS

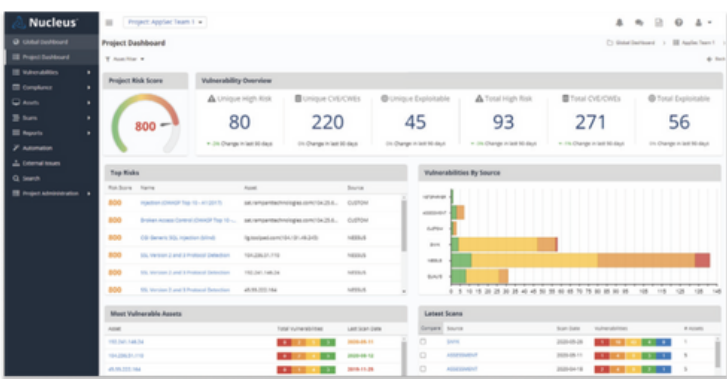

Integrating with over 100 scanners and external tools, Nucleus unifies your existing security stack, creating a single enterprise platform for all vulnerability analysis, triage, and remediation.

MODERNIZING THE WAY THE FEDERAL GOVERNMENT MANAGES VULNERABILITIES.

Vulnerability Intelligence

Nucleus Dashboard

Prototyped under NSA contract for real world IC use cases. As of May 2022, FedRAMP "in process." TS/SCI cleared support and engineering and deployed in AWS GOV CLOUD.

REDUCE TIME-TO-REMEDiate FROM MONTHS TO HOURS, WHILE REDUCING VULNERABILITY ANALYST HEADCOUNT BY 10X.

DEVSECOPS

Aggregate vulnerability scan data, track & report by development team, and automate issue tracking & ticketing.

NETWORK & INFRASTRUCTURE

Sync with CMDB tools for a consolidated asset inventory, enrich data with threat intel, and automate prioritization using asset & business context.

PEN TESTS & ASSESSMENTS

Centralize security & pen testing results, integrate with bug bounty & VDP platforms, and automate response to findings in real time.

Nucleus is a team of vulnerability management experts with decades of experience building and operating VM programs in both the public and private sectors. We're on a mission to automate the tedious VM process, enabling faster remediation while using less resources.
