NCLEUS & MANDIANT

Accelerate prioritization and response with integrated threat and vulnerability intelligence from Mandiant— Included free with all Nucleus subscriptions.

YOUR CHALLENGE.

Lack of actionable, real-time threat intelligence alongside application and network vulnerability data.

Aggregating and correlating all the data points necessary to make informed prioritization and remediation decisions for vulnerabilities is not only a headache for analysts and engineers, but isn’t fast enough to keep up with the business. With thousands, or even millions, of vulnerabilities in your environment, you need more insight to make confident decisions about what to fix first, without hiring hundreds of analysts. Further, other “black box” approaches to risk scoring force teams to make decisions without understanding the rationale behind them.

OUR SOLUTION.

The Nucleus Mandiant partnership makes it possible to quickly see all threat data for any vulnerability in your org.

Nucleus now enriches all vulnerability data using enterprise class vulnerability and threat intelligence powered by Mandiant, at no additional cost to Nucleus customers. By combining the aggregation, analytics, and vulnerability management orchestration capabilities within Nucleus with the insight and intelligence provided from Mandiant, teams can accelerate the prioritization and triage process using automation at scale to rapidly make confident decisions and accurately assess risk. Nucleus combines all the asset info, vulnerability data from scanning tools, and now threat intel into one platform to eliminate laborious manual data analysis and accelerate decision-making and prioritization.

HOW IT’S USED

Nucleus correlates Mandiant threat and vulnerability intel with all enterprise vulnerability and scan results, enabling:

- Advanced vulnerability analysis, triage, and prioritization informed by the latest Mandiant vulnerability research.
- Continuous monitoring of vulnerability exploitation activity targeting your industry, associated with known threat actors targeting your organization.
- Automated response workflows based on Mandiant expert risk ratings, exploitation activity, or any combination of provided vulnerability, threat, or asset information.
**NUCLEUS & MANDIANT**

**FIX WHAT MATTERS MOST – CUSTOMIZED TO YOU.**

With full access to Mandiant vulnerability intelligence within Nucleus, correlated to your vulnerability data, you can build vulnerability prioritization and response playbooks informed by leading vulnerability researchers and analysts. Nucleus operationalizes threat intel in the context of your organization and alongside all other known asset and vulnerability scan data, with clear, quantifiable metrics to report progress and results to senior leadership – creating a single source of truth for your vulnerability management activities.

Mandiant threat intelligence in Nucleus enables vulnerability analysts to quickly determine which vulnerabilities impacting their organization:

- Are considered Critical by Mandiant analysts
- Are being actively exploited in the wild
- Are being exploited by malware
- Are trivial to exploit
- Are zero-day vulnerabilities

**No Added Cost. No New License to Buy.**

The Mandiant threat intel feed within Nucleus is provided to Nucleus subscribers at no additional cost or third-party license requirement. Existing threat intel feeds can still be imported to Nucleus to supplement organizational data.

---

**MANDIANT INTELLIGENCE**

Mandiant Threat Intel gives unparalleled visibility and expertise into threats that matter to your business right now. The intelligence is compiled by over 300 security and intelligence individuals across 22 countries, researching via undercover adversarial pursuits, incident forensics, malicious infrastructure reconstructions and actor identification processes that comprise the deep knowledge embedded in the Mandiant Intel Grid.
