

NUCLEUS & ASSETNOTE

Continuous attack surface intelligence,
right alongside your vulnerability data.

YOUR CHALLENGE.

Lack of visibility into attack surface intelligence alongside application and network vulnerability data.

You can't protect what you don't know exists, which makes attack surface monitoring a key component of any mature security program, painting a clear picture of all assets in an environment. While these tools do an amazing job at identification, the data has traditionally lived separate from the broader vulnerability management datastream. As two separate sets of information, security teams lack full insight into their true security posture, making decisions on prioritization and remediation without a complete risk picture.

OUR SOLUTION.

Nucleus connects your attack surface data with your vulnerability data for an integrated, holistic view of your security posture.

With this integration, users can push continuous attack surface data from Assetnote into Nucleus automatically, providing accurate asset intel in a consumable format to be managed alongside other application and infrastructure vulnerability data. This connection automates the process of reporting attack surface findings to the VM team - saving time, simplifying reporting, and automating workflows.

KEY BENEFITS

SEE THE ENTIRE PICTURE.

Continuously identify and map all assets within your organization and pair it with available vulnerability data.

SPEED TIME TO REMEDIATE.

Make decisions faster and more accurately with consolidated information, continuously monitored for critical exposures.

TRACK & ANALYZE RESULTS.

Combine Assetnote data into Nucleus analytics engine for deep discovery and trend analysis across all known vulnerability sources.

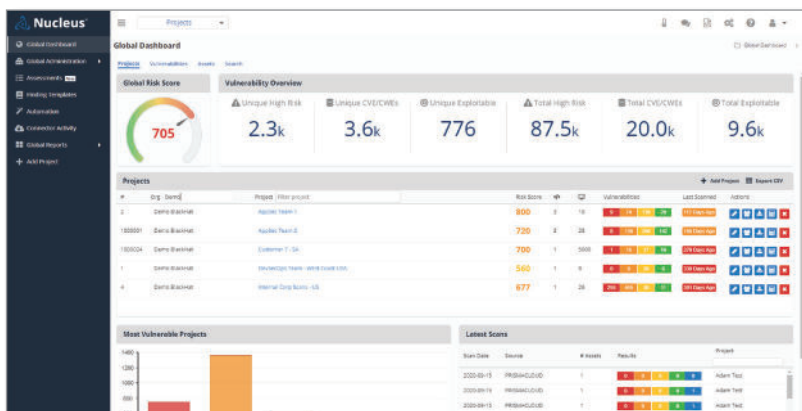

MINIMIZE FRAGMENTATION.

Marry your attack surface data with the rest of your application and network vulnerability data in a single, holistic view.

NUCLEUS & ASSETNOTE

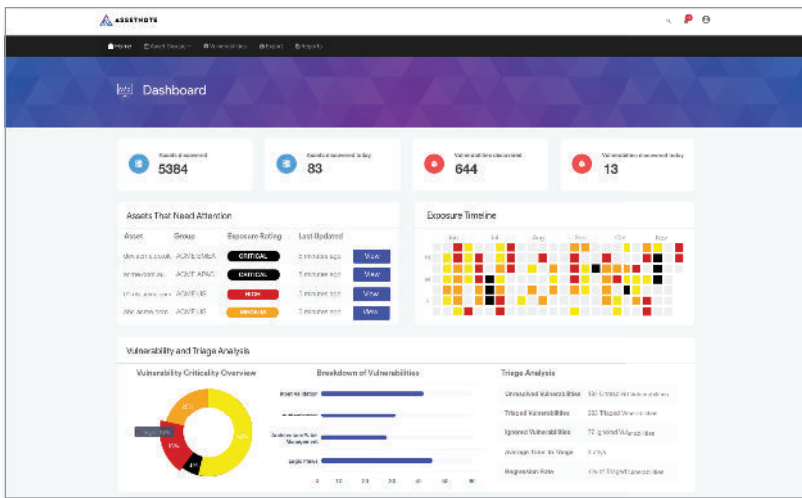

EMPOWERING ORGANIZATIONS TO IMPROVE THEIR ASSET AWARENESS AND VM ANALYSIS.

By combining capabilities, organizations gain a more accurate representation of the security posture of their assets, enabling leadership to make informed decisions when it comes to remediation and prioritization. Practitioners gain advanced situational awareness of their attack surface alongside their application and network vulnerability data - in one view.

Nucleus Dashboard.

Nucleus makes the tedious VM process simple through smart automation and workflow optimization, uniting the existing tools in your security stack, including attack surface intel tools such as Assetnote, in one view.

Assetnote Dashboard.

ABOUT ASSETNOTE

Assetnote is on a mission to bring the value of the hacker mindset to organizations across the world. As leaders in Attack Surface Management our products are used by companies all around the world, from innovative startups to Fortune 100 companies. Every day, we are monitoring hundreds of thousands of assets to help protect customers from compromise.
